DETAILED ACTION

1. The Amendment on 05/30/06 has been entered.

Response to Amendment/Arguments

2. Applicant's amendment and arguments filed on 05/30/06 have been fully considered and they are found unpersuasive.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.

Art Unit: 1713

3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claims 1-4, 6-19 and 21 remain rejected under 35 U.S.C.

103(a) as being unpatentable over Wenzel, U.S. Patent No.

6,180,735. The present invention claims the following open-

ended steps: forming a supported activator wherein the supported

activator is in mineral oil and contacting the supported

activator with a combination consisting essentially of a ligand

and a metal compound. Wenzel teaches the mixing of a supported

activator and with a transition metal compound formed from a

ligand and metal compound. See col. 21, lines 20-32. Wenzel

further asserts that any order of mixing will suffice. See id.

Wenzel further asserts the use of mineral oil to mix the

catalyst followed by polymerization. See col. 21, lines 32-37.

The Examiner contends that the addition of carbonyl satisfies

the addition of a separate ligand component. Furthermore, taken

these embodiments together one of ordinary skill would be

motivated to combine supported co-catalyst/mineral oil with the

transition metal compound to form a catalyst ready for

polymerization because Wenzel has provided the ingredients and

orders of mixing that would suffice leading one of ordinary

Art Unit: 1713

skill to merely optimize the catalyst preparation and polymerization.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

7. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
